Product Update Bulletin

Announcement Number:	102
Date of Announcement:	January 14, 2005
Product:	MITS.GUI
New Version:	5.1
Build Number.....	5.1.21

Summary of Changes:

- Support for Mercury Interactive QuickTest Professional version 8.0
- Support for Mercury Interactive TestDirector version 8.0
- Improved handling of Checkpoints
- Improved auto quick info pop-ups for MITS methods in QuickTest scripts
- Improved error handling and reporting
- Improved handling of the UserCustomization function
- Online User Guide

Functionality Affected:

Added Functionality:

- MITS.GUI now supports Mercury Interactive QuickTest Professional version 8.0 as well as QuickTest Professional version 6.5 and 6.0.
- MITS.GUI now supports integration with Mercury Interactive TestDirector version 8.0 as well TestDirector 7.2.
- Logging facilities have been added to MITS.GUI facilitating improved customer support.

Changed Functionality:

- Improvements:
 - Checkpoint handling has been improved, providing more flexible and reliable verification of checkpoints specified in the Datatables.
 - The auto quick info pop-up will now show the parameter type as object and ByVal string for the following properties and methods:
TestData(), ExitMethod(), ExitDetail(), NewBrowser(), Method_Type(), Method_Submit(), Method_SetSecure(), Method_Set(), Method_Select(), Method_FireEvent(), Method_ExtendSelect(), Method_Exists(), Method_DeSelect(), Method_Click()

- Error handling and reporting has been improved in the following areas:
 - Test Director Integration in the control panel applet.
 - Test Director Integration in the runtime engine.
 - Identifying ExitDetail entries in the roadmap file at runtime.
 - MITS.Method_XXX functions.
 - License Management..
- The User Customization function may now be created in either U.S. or U.K. English (UserCustomization or UserCustomisation). The success or failure of this function is now included in the test report as an information or warning message respectively. A message box is no longer displayed if the UserCustomisation returns a 0 (fail) result.
- Bug Fixes:
 - The tab order in the control panel applet is now left to right, top to bottom.
 - The memory leak caused by circular references in MITS runtime, which prevented the runtime engine from terminating, has been eliminated.
 - Issues related to communication with the MITS License Server have been resolved.
 - The registry key identifying the Test Director server configuration parameters is now correctly constructed at runtime.
